CONTEXT

Despite the continent's wealth of natural resources, Africa is currently one of the poorest continents in the world, with over half of the African population living on less than \$1.25 a day. The subversion of social and political life during the colonial period greatly contributed to this situation, but even after decolonization, Africa continues to be haunted by political instability, exploitation, and corruption.

However, there is hope for the future of Africa. According to a report published in 2018, Africa is one of the fastest-growing consumer and growth markets in the world. Consumer spending in the market has grown at a compound annual rate of 3.9% since 2010 and reached \$1.4 trillion in 2015. Estimates indicate that this figure would reach \$2.5 trillion by 2030.

Furthermore, Africa has untapped wealth, with nearly half of the world's uncultivated land located in sub-Saharan Africa, which could be put into production. Similarly, Africa only uses 2% of its renewable water resources compared to 5% worldwide. Wind and tidal resources are abundant and widely underutilized in North and South Africa.

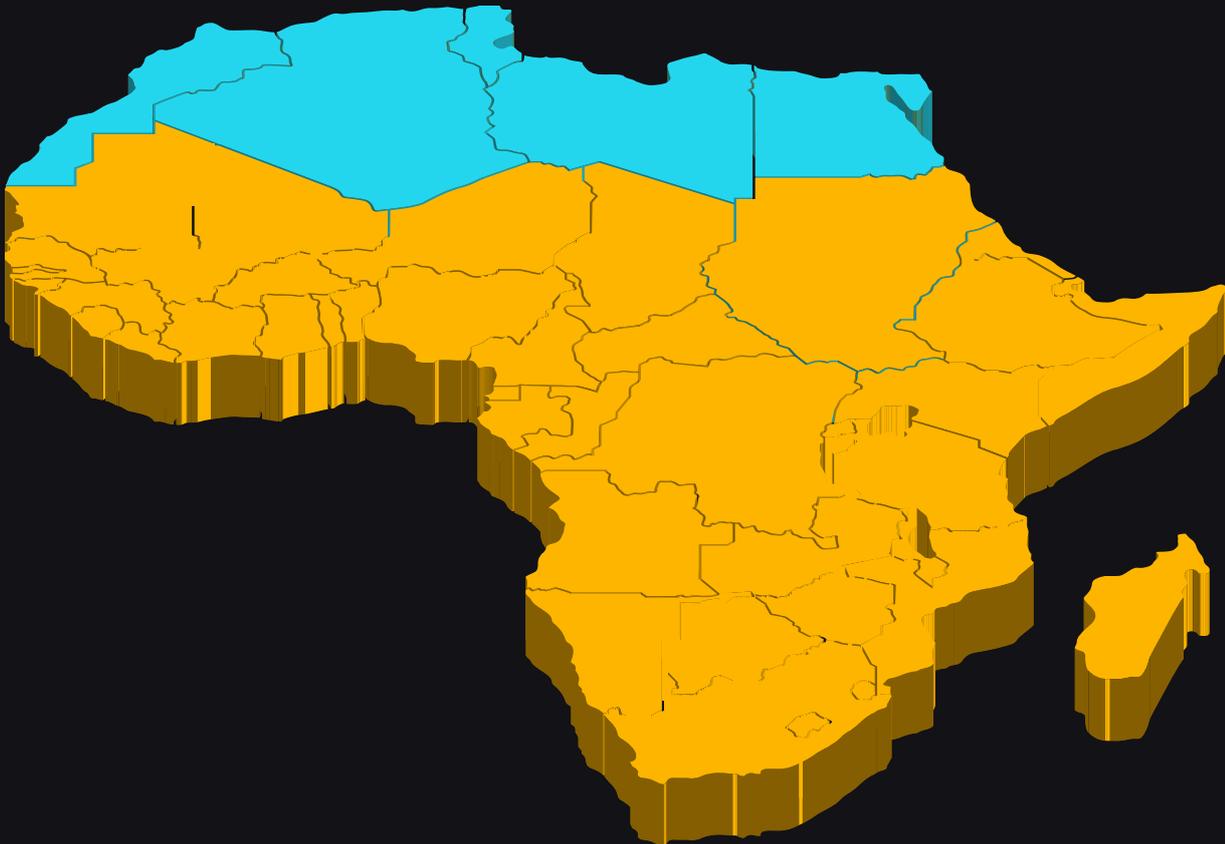

Africa also has massive growth potential in various sectors of the economy, ranging from health to agriculture. The continent could experience one of the fastest rates of urbanization in the world. It is projected that by 2034, Africa could have a larger working-age population than China or India.

However, to achieve this remarkably high growth potential, new and innovative ideas are needed to lift the African economy out of political turmoil and underutilization of resources. This is where blockchain technology can come in, offering solutions to underserved areas of the African economy.

The Zynecoin project is part of this vision for the future of Africa. By creating a cryptocurrency based in Africa, designed to improve the economic situation there, and developing its own Wethio blockchain technology, the Zynecoin project aims to stimulate technological innovation and improve the African market position across the continent.

The Economic and Technological Challenges in Sub-Saharan Africa

Sub-Saharan Africa is facing major economic and technological challenges, which limit investments and hinder economic growth. Public debt is one of these challenges, weighing heavily on African countries and creating a vicious cycle that can lead to a credit crisis.

Banks seeking to meet their targets may be tempted to make imprudent loans, which can contribute to exacerbating the problem. Additionally, the prevalence of high credit risk makes it more difficult to enter into partnerships with businesses located in other countries, thereby hindering the growth of the African economy.

To address these challenges, it is necessary to adopt innovative technologies that can strengthen economic efficiency and stimulate growth in the region. Blockchain and cryptocurrencies can offer innovative solutions to the economic and technological challenges in sub-Saharan Africa.

The Economic Benefits of Using **Blockchain in Africa**

Blockchain and cryptocurrencies offer innovative solutions to address these challenges. Wethio and Zynecoin provide a strong, efficient, independent, and high-value utility economic infrastructure for African nation-states.

Tokenization allows for the digital representation of real assets, such as land, properties, and natural resources, which facilitates their management and exchange through the blockchain, offering benefits in terms of transaction transparency, security, and efficiency.

Smart Contracts are another innovation offered by blockchain to improve economic efficiency. They allow for secure automation of commercial transactions, offering a practical solution to the challenges faced by African businesses. Insur-

ance contracts can be automated through Smart Contracts, facilitating and accelerating payments in the event of a claim, while reducing administrative costs.

Wethio's PoSV (Proof-of-Stake Voting) protocol allows all members of the system to share in the ZYN rewards of a successful transaction, creating a strong and independent monetary system. This strategy also encourages the proliferation of mining, strengthening the underlying economic infrastructure and improving transaction speeds.

By providing startup founders with the technological infrastructure they need, Wethio encourages the use and democratization of blockchain in underserved market sectors. Through the MisterZ incubator, startups funded by Zynecoin will have access to a strong and engaged community that will support their project while providing a platform to find potential investors.

By working together to adopt these technologies, Africa can position itself as a major player in the global digital transformation. Zynecoin offers a solution for a strong and independent African economy, free from the capricious nature of international geopolitics and economic exploitation. By encouraging participation and collaboration, blockchain can contribute to the creation of a strong and participatory African economy, as well as the democratization of technology in underserved market sectors.

INTRODUCING ZYNECOIN

Zynecoin

00

WHITE PAPER

2018

In 2018, the Zynecoin team launched an ambitious project aimed at creating a cryptocurrency for Africa, as well as its own blockchain technology to democratize the use of blockchain on the continent. Since then, this team has worked

tirelessly to achieve these goals, and in 2020, their efforts finally paid off: Zynecoin is now based on its own blockchain, named Wethio. This development has strengthened Zynecoin's ability to address economic and technological challenges in Africa, offering an innovative solution to support the continent's economy.

Wethio is a one-of-a-kind blockchain that encourages cooperation among miners and allows anyone to participate in mining the blockchain, regardless of their level of

computational power. This collaborative approach encourages a greater number of participants, which should translate into widespread adoption of blockchain technology in Africa.

Zynecoin is the native currency of the Wethio blockchain, and it is designed to be used in a wide range of decentralized applications (dApps) that will be developed on the Wethio platform. Zynecoin's mining fees are distributed fairly among miners, voters, NGOs, and African governments, contributing to the economic and social empowerment of the African continent.

Furthermore, the Zynecoin team recently announced the creation of an incubator called MisterZ, which aims to help African start-ups grow by providing tools, resources, and service providers. The MisterZ incubator will be anti-scam, ensuring

The African market is booming and represents an exceptional opportunity for investors and innovators. With abundant natural resources, a young and increasingly connected population, and high economic growth rates, Africa is ready to become a major player in the global economy. The Zynecoin project and the Wethio blockchain are key elements of this transformation, offering an innovative and equitable solution to stimulate economic growth and the democratization of blockchain technology in Africa.

THE UTILITY VALUE OF ZYNECOIN

Zynecoin

10

WHITE PAPER

Zynecoin has an undeniable ethical dimension, as every transaction carried out on the Wethio blockchain automatically and systematically generates a commission in Zynecoin, which is paid into wallets exclusively intended for Africa.

The Wethio blockchain aims to host the development of smart contracts, intelligent contracts that automate and secure tasks. It also allows the deployment of tokens, ZRC20s, with strong utility values.

Bridges have been created from Wethio to enable interoperability with other blockchains such as Ethereum and Binance Smart Chain. Decentralized applications (DApps) have also been developed on the Wethio blockchain, such as Wethio Wallet, Wethio Scan, and Wethio Master.

This entire ecosystem has a permanent impact on Zynecoin, as using all these features requires paying transaction fees in Zynecoin.

OUR DAPPS

WETHIO WALLET

Wethio Wallet is an electronic wallet that allows you to securely store, send, and receive Zynecoins. It is available for download on Mac OS and Android platforms.

The wallet is easy to use and has an intuitive user interface. It is also highly secure thanks to cutting-edge encryption technology and robust security protocols.

Additionally, Wethio Wallet allows

users to easily manage their digital assets, track their transaction history, and interact with the Wethio blockchain.

Wethio MASTER

WETHIO MASTER

Wethio Master is a key feature of the Wethio blockchain that ensures the security, stability, and governance

of the Zynecoin ecosystem. It is a network of 157 Masternodes that secure the Wethio blockchain by using their computing power to create and sign blocks. These Masternodes are responsible for validating transactions and maintaining the network. As a reward for their contribution, Masternodes receive Zynecoin (ZYN), the native cryptocurrency of the Wethio blockchain.

The Wethio Master configuration has been designed to maximize the decentralization of the governance system based on Wethio's Masternodes. Each staker on the Wethio blockchain has the right to vote for a Masternode. This allows users to directly contribute to the governance of the blockchain and participate in key decisions regarding the evolution of the Zynecoin ecosystem.

Wethio

SCAN

ated on the network and track the total number of transactions carried out. WethioScan is a useful tool for monitoring activity on the Wethio network and understanding how the blockchain works.

WETHIO SCAN

WethioScan is a blockchain explorer that allows users to view transactions, blocks, and other data on the Wethio network. Users can search for specific transactions by entering an address, transaction hash, or block, and view transaction details such as sending and receiving addresses, transaction fees, and the transaction amount. Additionally, users can view the latest blocks cre-

Wethio

Bridge

viding wider usage and greater accessibility. The Wethio Bridge feature contributes to the adoption and expansion of the Zynecoin ecosystem, offering users more flexibility and choice in using their cryptocurrency.

WETHIO BRIDGE

Wethio Bridge enables the conversion of Zynecoin, the native cryptocurrency of the Wethio blockchain, into ERC-20 (Ethereum) and BEP-20 (Binance Smart Chain) tokens. This allows users to easily transfer their Zynecoin onto Ethereum and Binance Smart Chain platforms, thus pro-

THE FUTURE OF ZYNECOIN

MISTERZ

MisterZ will be a crypto project incubator that will enable new projects to build an organic community and find all the necessary tools and service providers for the establishment and evolution of their project.

MisterZ will be an ANTI-SCAM platform that will guarantee investors that their funds will not fall victim to an EXIT SCAM. Funds raised for each project will be released gradually as the project progresses.

MisterZ will operate thanks to the decentralization, traceability, and security of the Wethio blockchain technology. A community of experts will also be responsible for analyzing, verifying, and assessing the feasibility of each project. These experts will ensure a qualitative selection of projects listed on the MisterZ incubator.

The ICOs (fundraising) of these projects will be conducted exclusively in Zynecoin, which will significantly impact its speculative value and substantially strengthen its utility value. This will be even more impactful as the number of Zynecoin in circulation is very limited, with only 100,150,000 Zyn.

It is easy to imagine that with the prospect of just ten ICOs, each having a com-

munity of 10,000 people, this could potentially bring 100,000 new investors to Zynecoin. This could drive the price of Zynecoin to very high levels, enabling it to enter the top 100 in global ranking.

This ranking would give Zynecoin international visibility in the cryptocurrency market, exponentially increasing its appeal in the cryptosphere and enhancing the value of investment for investors.

ROAD MAP

2018

- Creation of Zyn in ERC20
- Presale

2019

- ICO
- Listing of Zyn Token on Idax

2020

- Official Launch of Wethio Blockchain**
- ZYN evolves from an ERC20 token to the Official native coin of the Wethio Blockchain
- Listing on Bibox
- Listing on Probit

2021

- Zynecoin lists on WethioX
- Launch of Zynecoin Gold NFT's
- Development of smart contracts on the Wethio Blockchain

2022

- USA Promotional Event
- Zynecoin integrated with Ledger
- Development of MisterZ Project Incubator

2023

- Investor Meeting -Marrakech
- Launch of MisterZ Incubator

Zynecoin

16

WHITE PAPER

TOKENOMICS

Zynecoin allocation (ZYN)

In total, **170 million Zynecoin** tokens were created on Ethereum (ERC20).

51,009,352 (ZYN) were sold from our **ICO**, the rest (118,990,648 ZYN) were destroyed.

The ZYN issuance on the Wethio protocol will be limited to **100,150,000 (ZYN)**, which is 69,850,000 less than the initial issuance.

Token allocation based on **100,150,000** total issue :

15% African states		6% Legal work		15% Operational actions	
7.5% Team and consultants		8,5 Masternodes		25% Marketing Operations	
3% Promotions		10% NGOS		10% Security reserve	

CONCLUSION

In conclusion, Zynecoin is an innovative and promising cryptocurrency created on the Wethio blockchain to meet the needs of the crypto community in Africa and around the world. With its robust and expanding ecosystem, Zynecoin offers numerous unique features and benefits, such as decentralized staking, DApps (Wethio Wallet, Wethio Scan, Wethio Pool, Wethio Bridge), and the MisterZ incubator.

MisterZ is one of the most recent and exciting achievements in the Zynecoin ecosystem. This crypto project incubator will enable new projects to develop securely, with a reliable platform and a community of experts ensuring the quality of projects. The ICOs of the projects will be carried out in Zynecoin, strengthening the utility value of Zynecoin.

With a limited number of Zynecoin in circulation and the enormous potential of MisterZ, it's easy to see why Zynecoin has a strong future outlook. Zynecoin could easily make its way into the top 100 of the global rankings, giving it international visibility in the cryptocurrency market and attracting the attention of investors worldwide.
